

Create a Chuck Norris Joke Application

We as developers like Chuck Norris jokes. Therefor we created the following assignment to test your Frontend skills/ knowledge.

Please create a git repo (can be local) before you start this assignment. When committing please give a proper description to explain your choices.

It should only run in chrome (so you can use es6). Please don't use any boilerplates. You can/may use any framework/lib you want.

When finished send a link or send your folder(zip).

Assignment

We want to have an Application where we can fetch 10 Random Chuck Norris jokes. These jokes can be fetch from the following API <http://api.icndb.com/jokes/random/10>.

When these jokes are fetched via a button they need to be displayed in a list. In this list we can mark certain jokes as favourite. The favourite jokes will appear in a favourites list with a max of 10 (unique) items. There should be an option to remove jokes from the favourite list as well.

On refresh the favourites lists should be maintained.

We can also turn on/off a timer via a button (every 5 seconds) who will add one random joke to the favourites list <http://api.icndb.com/jokes/random/1> until the list has 10 items.
